Figure 1. The effect of the number of trials on the accuracy of the responses. The figure shows two bar charts side-by-side. The left chart is labeled 'Accuracy' and the right chart is labeled 'Error'. Both charts have 'Number of Trials' on the x-axis (ranging from 0 to 10) and 'Percentage' on the y-axis (ranging from 0 to 100). In both charts, the bars show a decreasing trend as the number of trials increases. The 'Accuracy' chart has a legend indicating that the solid black bars represent 'Correct' responses and the white bars with black outlines represent 'Incorrect' responses. The 'Error' chart also has a legend indicating that the solid black bars represent 'Correct' responses and the white bars with black outlines represent 'Incorrect' responses.
